SUMMARY

AI and Data Science undergraduate at IIT Guwahati with hands-on data science internship experience and a strong interest in machine learning, agentic AI systems, and Python/API-based problem solving. Comfortable building end-to-end pipelines, from data processing to RAG and agent-based applications.

EDUCATION

Indian Institute of Technology Guwahati

Expected 2029

BSc (Honors) in Data Science and Artificial Intelligence

– Relevant Coursework: Python Programming, Data Science, Artificial Intelligence, Statistics, Probability, Databases, Machine Learning

EXPERIENCE

Data Scientist Intern

Dec 2025 – Jan 2026

Evoastra

Remote

- Built an unsupervised anomaly detection pipeline to identify unusual building energy consumption patterns from meter data.
- Cleaned and transformed data, handled missing values, engineered features, and prepared reproducible model-training notebooks.
- Trained and compared Isolation Forest and Local Outlier Factor baselines; documented code, results, and project workflow on GitHub.

PROJECTS

god-eyes | TypeScript, Python, React, CesiumJS, Fastify, PostGIS | [GitHub](#)

- Built a full-stack geospatial intelligence prototype with 8 live data layers, including aviation, maritime, satellites, weather, earthquakes, borders, energy, and news, on a CesiumJS 3D globe.
- Integrated 10+ external data sources using Python fetch/normalize pipelines, Fastify REST APIs, and WebSocket broadcasters with client-side filtering.
- Designed a PostgreSQL/PostGIS schema with 40+ tables, shared Zod contracts, CI, and Vitest coverage for an active 678-commit prototype.

AI-Codebase-Onboarding-Agent | Python, LangGraph, FastAPI, Streamlit, pgvector | [GitHub](#)

- Building a code-aware RAG assistant that indexes repositories, extracts symbols/routes, chunks functions, and answers architecture, debugging, and impact-analysis questions with file-level evidence.

AI-Research-Paper-to-Prototype-Agent | Python, LangGraph, FastAPI, Streamlit, PyMuPDF | [GitHub](#)

- Designing an agentic RAG workflow that parses AI/ML papers into method breakdowns, implementation roadmaps, starter code structure, experiment configs, and reproducibility reports.

AI-RFP-Proposal-Generative-Agent | Python, LangGraph, FastAPI, Streamlit, pgvector, Pydantic | [GitHub](#)

- Designing an RFP/tender analysis agent to extract requirements, retrieve company evidence, score compliance, identify risks/gaps, and generate clarification questions and proposal drafts.

ACHIEVEMENTS

- Independently built and shipped 4+ AI/data engineering projects spanning geospatial systems, agentic RAG, and anomaly detection — several maintained with CI pipelines and automated test coverage.
- Completed certifications from OpenAI and Anthropic (Claude), along with selected Coursera courses and Google badges, reflecting continued self-directed learning in AI/ML.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL, R, C

Data Science & ML: Pandas, NumPy, scikit-learn, Jupyter Notebook, Matplotlib, Seaborn, feature engineering, anomaly detection

Backend & APIs: FastAPI, Fastify, REST APIs, WebSockets, Pydantic, Zod, Streamlit

Databases & Data Systems: PostgreSQL, PostGIS, pgvector, MySQL, time-series data, SQL migrations

AI / Agents / RAG: LangGraph, LangChain, LLM APIs, embeddings, vector search, prompt workflows, structured extraction

Tools & Analytics: Git, GitHub, GitHub Actions, Docker basics, npx, CLI workflows, Excel, Power BI
